5. Annex: notes and explanations of the elements of tables and graphs

International Air Arrivals: The data relate to arrivals of passengers on international flights regardless of the place of residence. For the Athens airport data, due to the perturbations of this survey and/or the small sample size during the period March 2020 - June 2021, the corresponding passenger volume estimates should be treated with caution and comparisons avoided. The classification of airports is as follows: Dodecanese: Rhodes-Kos - Crete: Heraklion - Chania, Ionian: Corfu - Zakynthos - Kefalonia - Aktion, Cyclades: Mykonos - Santorini, other: Samos - Skiathos - Kavala-Mytilene.

Domestic arrivals at the main airports: A passenger making a round trip is counted twice: both on arrival at his destination and on return to his seat. The data of the last available month for the Athens airport are an estimate of INSETE Intelligence. The classification of airports is as follows: Dodecanese: Rhodes-Kos, Crete: Heraklion - Chania, Ionian: Corfu - Zakynthos - Kefalonia - Aktion, Cyclades: Mykonos - Santorini, other: Samos - Skiathos-Kavala - Mytilene.

Road arrivals: The registration of road arrivals is done by the local police stations on the basis of nationality, regardless of the place of permanent residence and-therefore - includes foreign immigrants in Greece returning from a trip abroad. The categorization of the countries is as follows: Albania: Kakavia - Krystallopigi - Sagiada-Mertzani, Bulgaria: Ormenio – Kyprinos -Nymfaia - Promachonas - Exochi - Ag. Konstantinos, North Macedonia: Evzonoi - Doirani-Niki, Turkey: Kastanies-Kipoi.

Arrivals based on border survey of the Bank of Greece: The data are estimated based on a sample survey and relate to arrivals of residents of other countries, regardless of the way of transition (by air, by road, by sea) and regardless of nationality, i.e. they also include Greek permanent residents abroad while they do not include foreigners permanently residing in Greece.

Bank of Greece border

Receipts based on border survey of the Bank of Greece: The border survey estimates receipts based on a sample survey among residents of other countries visiting Greece.

Review pro-Hotel Quality Indexes: The tables capture the Global Review Index (GRI ®) as well as the individual customer satisfaction indicators of hotels, calculated by ReviewPro, a company specializing in measuring the online reputation of hotels. This indicator is calculated for each hotel, by analyzing the variables associated with guest comment posts on hundreds of social media platforms, hotel commentary websites and OTAs (online travel agents) websites. Indicators above 80% indicate a positive experience. The indicators are qualitative and can be used to assess the evolution of the quality of services provided. The data presented are based on reviews by Greek hotel and hotel customers in the competing destinations depending on availability. Therefore, the indicators reflect the competitive level of the Greek hotel product, as well as that of the competing countries.
